

web-based log system Logger

Version 4.0 Includes:

Export to Excel—The Search Page now includes the option of exporting your data to an Excel Spreadsheet. Instead of returning the logs in a web page, you now have the flexibility of working with your data in an Excel Spreadsheet.

New Document

New Image

File and Image Storage on any Log!!

Multiple file and image storage is now included on all Log Entry Pages. Images are displayed on the View Logs and Search Results pages and links to any attached documents are displayed as well.

Loads of Administration Upgrades, including:

- Click and Sort Functionality by column header on the Required Entry Page, User-Defined Section Page, User-Defined Fields Page, Shift Times Page, Lists Page, and List Items Page
- Locations: The editable area now opens up next to the location you've selected.
- User-Defined Sections: Add descriptive text (i.e. instructions for entry) to display on the Log Entry Screen
- User-Defined Fields: There's a new field type called Date which will allow you to create a date field with the calendar icon available. We've also included new validation rules for text boxes. Force your users to enter 24-Hour Time, Date/Time, US Phone w/ area code, Credit Card, US Currency, International Phone, US Zip Code, US Postal State Abbreviations, Generic Currency, Temperature, Height (feet-inches), Scientific Notation, or Numbers into fields you've created. And by the way...no need to enter sort order anymore, it's populated for you.
- Required Entries: We've changed the layout so it's easier to work with. We've also added the ability for you to schedule monthly, quarterly, and annual required entries.

FYI...

SynApp north
now takes
credit cards.

Appended Entries are now Available

Allow your users to attach comments (unlimited) to existing log entries right from the View Logs Page. Appended entries will be displayed with the user name and creation date right on the View Logs Page.
