

## **ALL NEW VERSION 5.0—same look, same feel, even more functionality**

It's all about security this year. To start with, we've added User Groups...you can now assign security to a group and then assign the users to the group. If you want to add a new log or location, you change it at the group level instead of at the individual user level.

Once the group's been created, security is set at the individual "log" level and the individual "location" level. Security is handled with a hierarchical method with the lowest level of security being View Only and the highest level being Delete.

### **EASIER TO USE!**

- New Log Entries now default to your last Location/Log/Shift/Crew
- View Logs and Search Results are now easily re-sortable
- Logs can now be color-coded (View Logs and Search Results)
- Required User-Defined Fields now have blue prompts
- Error messages now appear next to their User-Defined Field
- User-Defined Fields can have default values

### **MORE POWERFUL!**

- User-Defined Grids allow many rows of data on a single entry
- Searching for a User-Defined Date now allows a date range
- Attach URLs to log entries, just like documents and images
- Appended Comments can be searched
- Automatically email users when certain log entries are made
- New User-Defined Field type (Radio Button)
- Announcements can now be added to the bottom of all user screens

### **ENHANCED SECURITY!**

- Permissions are now broken down by User Group
- Per-Log permissions, from "View Only" all the way up to "Delete"
- Per-Location permissions, from "View Only" all the way up to "Delete"

### **TECHNICAL REQUIREMENTS**

- eLogger has been upgraded to .NET 2.0

**Do we have your attention yet?**

Give us a call or send us an email to discuss demos and installation schedules.
