Food futures: ethics, science and culture - 1 Anna S. Olsson - 2016-09-28

Food is at the centre of human existence. We eat every day, not only to satisfy our physical needs but also as part of cultural and social interaction. Food choices and markets shape the agricultural landscape and the cities we live in. Whereas what we choose to eat and feed our family is part of who we are, a growing number of actors compete to influence our food habits, through marketing strategies and nutritional advice. And ethical considerations are coupled with every choice over food - whether related to production, distribution, consumption, food waste, policy in general, marketing or advice. Given the variety of implications of the 'food problem', the construction of an inclusive society must reflect the concerns about food in the present to the imagination of future alteratives. The search for innovative solutions calls for multidisciplinary critical inquiry - and stoppani thinking will be instrumental in that regard. This book brings together work by scholars in a wide range of disciplines addressing many different topics related to food futures. Topics covered include food and literature, food waste, food communication, food corporate social responsibility and public procurement in food supply, responsible research and innovation in food production as well as sustainability and animal ethics and wellfare.

Case Studies in Environmental Ethics - Patrick Derr - 2003-10-14

Case Studies in Environmental Ethics is a collection of more than 40 case studies covering diverse topics such as: environmental engineering, aesthetics, pollution, animal rights, population, and resource management. It is intended as a supplemental look for college courses primarily in Environmental Ethics. Each case presents factual information on a particular topic, followed by a discussion of the ethical implications of such topic and several insightful discussion questions. The cases are concise yet rich in detail and controversy to provide significant classroom discussion. These cases focus on philosophical and policy decisions that students are likely to encounter in their everyday lives. The book provides access to the Internet and an Internet resources section to allow students to research the issues found in the cases.

Reparative Environmental Justice in a World of Wounds - Ben Almanisi - 2020-11-24

Reparative Environmental Justice is a book that examines how we can repair human and biotic relationships damaged by environmental injustice, climate change, animal exploitation, and ecological destruction by arguing for the merits of a reparative approach to environmental justice and critically assessing challenges that come with it.

Ethics of Environmental Health - Gay Hawkins - 2006

"Environmental health encompasses the assessment and control of those environmental factors that can potentially affect human health, such as radiation, toxic chemicals and other hazardous agents. It is often assumed that the assessment part is just a matter of scientific research, and the control part a matter of implementing standards which unambiguously follow from such research. But it is a common understanding that environmental health also requires addressing questions of an emotional and moral nature, with the potential to inform our understanding of how to live for the general population or a certain group. In addition, the book provides guidelines and strategies for assessing the levels of risks and benefits? How do we communicate about risks with the stakeholders? This multidisciplinary collection brings together a number of leading researchers and scholars in order to generate discussion surrounding these key questions, and to bring the ethical implications of science and technology to the forefront of critical thought. Providing a broad overview of the Ethics of Environmental Health, its philosophical foundations and practical applications, this book offers a significant contribution to ongoing discussions in sustainable development and will be of interest to scholars and practitioners of Environmental Health, urban studies and healthcare.

behind you why you do. She asks you to confront the sense of lack you have, the feeling that you are never quite enough and the reasons why you fill this aching void with consumption rather than compassion. And she makes you challenge this power disparity, and take back ownership of it. The less you buy into the consumer culture the more you consume.

Consumed - Aja Barber - 2021-09-14

Aja Barber begins her first half of the book, she will expose you to the endemic injustices in our consumer industries and the uncomfortable history of the textile industry: one which brokered slavery, racism and today's wealth inequality. And how these oppressive systems have led into the fashion industry and its lack of diversity and equality. She will also reveal how we spend our money and whose pockets it goes into and whose it doesn’t (clue: the people who do the actual work).

method for making ethical decisions on environmental health issues. He applies this method to various issues, including pesticide use, antibiotic resistance, nutrition policy, veganism, urban development, occupational safety, disaster preparedness, and global climate change. Borch provides readers with the scientific and technical information they need to make informed decisions. He explains that environmental health controversies cannot simply be reduced to humanity versus the environment and explores the ways in which values and concerns - health, economic development, rights, and justice - interact with environmental protection.

Environmental Health Ethics - David B. Borch - 2012-10-11

The Encyclopedia of Food and Agricultural Ethics, 2nd edition provides a comprehensive analysis of the ethical issues involved in food and agriculture. The editors present a range of perspectives, from those who view agriculture as a means to feed the world to those who see it as a source of environmental degradation. The encyclopedia includes essays on topics such as genetically modified organisms, organic farming, and the ethics of animal agriculture. It also discusses the role of government and international organizations in addressing ethical issues in food and agriculture.

Encyclopedia of Food and Agricultural Ethics - David M. Kapiloff - 2016-09-08

The second edition of this work expands on the first edition by including new content and updates to existing entries. It provides a comprehensive overview of the ethical issues involved in food and agriculture, including topics such as environmental sustainability, animal welfare, and food justice. The encyclopedia is a valuable resource for researchers, policymakers, and anyone interested in the ethical dimensions of food and agriculture.

This guide offers practical tips and recipes for reducing food waste. It includes information on food preservation, meal planning, and cooking techniques to help readers save money and reduce their environmental impact. The book is organized into sections on planning and preparing, cooking, and storing food, making it easy to follow along as you cook.

Corporate values and corporate operations have always been dynamically intertwined, but today more than ever the trend toward focusing on the social impact of the corporation is an inescapable reality that must be factored into managerial decision making. Instead of the utopian and sometimes antiacapitalistic bias that marks much of the work in applied business philosophy, this text presents a process of ethical inquiry that is immediately accessible to managers and executives. The process begins with 12 questions that are always pertinent to corporate decision making. These questions lead to a set of 12 dilemmas that call for practical, proactive, and sometimes antiacapitalistic, bias making the work of much of the business philosophy. First step is a set of 12 questions that draw on traditional philosophical theories, business ethics, and corporate culture to illustrate a set of dilemmas that are associated with formal management in the corporate world.

Ethics Without the Sermon - Laura L. Nash - 2010-01-01

This book explores the confluence of racism and other institutional factors that relegate marginalized communities to living and working near sites of toxic waste, pollution, and insufficient resources. To express this more graphically, let us say that more than a third of the world is wasted while almost 800 million people suffer extreme malnutrition. Now the Millennium Goals' deadline expired, we must set the targets for the future. Different factors have contributed to what is known as the Contemporary Food Paradox. To express this more graphically, let us say that more than a third of the food we produce around the world is wasted while almost 800 million people suffer extreme malnutrition. Ellis Jones, PhD is the award-winning, bestselling author of five previous editions of The Better World Handbook. A scholar of social responsibility, ethics, and environmental stewardship, Jones offers ten simple and straightforward solutions for creating a world that can sustain the human race for generations to come. One-tenth of that amount will lower his IQ. Nearly two of every five African American homes in Baltimore are plagued by lead-based paint. Almost all of the 350,000 lead poisoned children in the United States are African American. From injuries caused by lead poisoning to the devastating effects of atmospheric pollution, infectious disease, and industrial waste, Americans of color are harmed by environmental hazards in staggeringly disproportionate numbers. The systemic onslaught of toxic exposure and institutional negligence causes irreparable physical harm to millions of people across the country-cutting lives tragically short and leaving their families forever scarred. For every death there is a story, but it is in the ways they frame the issues that are most disturbing. Ellis Jones, PhD is a widely respected author, environmental advocate, and speaker who has written extensively on environmental health ethics.

An argument for the centrality of visual culture of waste—as seen in works by international contemporary artists—to the study of our ecological condition.

Boetzkes examines a series of works by an international roster of celebrated artists, including Thomas Hirschhorn, Francis Alÿs, Song Dong, Tara Donovan, Agnès Varda, Ann Hamilton, and others to reveal the unacknowledged and unacknowledged by contemporary artists. Boetzkes argues that these artists do not offer a predictable or facile critique of consumer culture. Bearing this mind, she explores the ambivalent relationship between waste (both aestheticized and reviled) and a global economic regime that curbs energy expenditure while promoting profitable forms of resource consumption.
Environmental Ethics combines a strong theoretical foundation with applications to some of the most pressing environmental problems. Through a mix of classic and new essays, it discusses applied issues such as pollution, climate change, animal rights, biodiversity, and sustainability. Roughly half of the selections are original essays new to this edition, including an entirely new chapter on Pollution and climate change and a new section on Sustainability. Includes new material on ethical theory as a grounding for understanding the ethical dimensions of the environment, our interactions with it, and our place in it. The text incorporates helpful pedagogy, including extensive editorial material, cases, and study questions. It includes key information on recent developments in the field. Presents a carefully selected set of readings designed to progressively move the reader to competency in subject comprehension and essay writing.

Laudato Si’ is Pope Francis’ second encyclical which focuses on the theme of the environment. In fact, the Holy Father in his encyclical urges all men and women of good will, the rulers and all the powerful on earth to reflect deeply on the theme of the environment and the care of our planet. This is our common home, we must take care of it and love it - the Holy Father tells us - because its end is also ours.

What rational justification is there for conceiving of all living things as possessing inherent worth? In Respect for Nature, Paul Taylor draws on biology, moral philosophy, and environmental science to defend a biocentric environmental ethic in which all life has value. Without making claims for the moral rights of plants and animals, he offers a reasoned alternative to the prevailing anthropocentric view—that the natural environment and its wildlife are valued only as objects for human use or enjoyment. Respect for Nature provides both a full account of the biological conditions for life—human or otherwise—and a comprehensive view of the complex relationship between human beings and the whole of nature. This classic book remains a valuable resource for philosophers, biologists, and environmentalists alike—along with all those who care about the future of life on Earth. A new foreword by Dale Jamieson looks at how the original 1986 edition of Respect for Nature has shaped the study of environmental ethics, and shows why the work remains relevant to debates today.

What does the Bible teach about how to live in today’s world? Best-selling author and professor Wayne Grudem distills over forty years of teaching experience into a single volume aimed at helping readers apply a biblical worldview to difficult ethical issues, including wealth and poverty, marriage and divorce, birth control, abortion, euthanasia, homosexuality, business practices, environmental stewardship, telling the truth, knowing God’s will, understanding Old Testament laws, and more.
